Objective

Motivated and detail-oriented Computer Science graduate seeking an entry-level machine learning role to apply strong foundations in Python, data preprocessing, and model building. Eager to contribute to data-driven solutions and grow within a collaborative AI/ML team.

Education

St. Joseph Engineering College, Mangaluru <i>Bachelor of Engineering in Computer Science</i>	2023 – Present <i>CGPA: 9.03</i>
Brilliant Pre-University College, Hassan <i>Pre-University Education (PCMC)</i>	2020 – 2022 <i>Percentage: 91%</i>
United Academy School, Belur <i>High School (SSLC)</i>	2020 <i>Percentage: 93.6%</i>

Technical Skills

Languages: Python, C, SQL, HTML, CSS
Machine Learning: Scikit-learn, ANN, CNN, Machine Learning Fundamentals
Data Analysis: Pandas, NumPy, Matplotlib
Web Development: React.js, FastAPI, REST APIs
Databases: MySQL, PostgreSQL, MongoDB
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Projects

Multi-Agent Smart Energy Trading System (Major Project) <i>Python, Mesa, NumPy, Pandas, Matplotlib, PostgreSQL</i>	2026 – Present
- Developed a decentralized energy trading platform using Multi-Agent Systems. - Implemented Producer, Consumer, Grid, and Market agents for autonomous energy management. - Designed dynamic pricing based on energy demand and supply. - Built dashboards to monitor energy generation, consumption, and trading activities.	
FishAI – AI-Based Fishing Zone Prediction System <i>Python, Scikit-learn, React.js, APIs</i>	2025 – 2026
- Developed an AI-based system to predict Potential Fishing Zones (PFZs) using environmental and oceanographic data, including sea surface temperature, chlorophyll concentration, and ocean currents. - Implemented data-driven machine learning models to identify high fish-density areas and improve fishing efficiency. - Designed a user-friendly dashboard with spatial visualizations to display predictions and support informed decision-making. - Reduced dependency on traditional methods while minimizing fuel consumption and improving overall catch efficiency.	
Raitha Bandhu – Smart Information System for Farmers <i>React.js, Node.js, MongoDB, REST APIs</i>	2024 – 2025
- Developed a full-stack web application to provide farmers with real-time market prices, weather updates, and government scheme information. - Designed a responsive frontend using React.js and implemented RESTful backend services using Node.js and MongoDB. - Applied Design Thinking approach using user research insights to improve accessibility and support informed decision-making for farming communities.	

Certifications

- NPTEL – Privacy and Security
- Infosys Springboard – Design and Analysis of Algorithms
- Infosys Springboard – Computational Theory
- NPTEL – Industrial Wastewater Treatment
